

Safety Built in

Extended the forward/reverse lever for easier direction changes while wearing lineman's gloves & notice the white non-conductive cap.

The Ratcheting Wheel was designed by a lineman to solve everyday problems while in the field working in tight spaces with thick gloves.

Our patented easy grip Ratcheting Wheel allows the lineman to stop the lug from spinning back and forth during the initial tightening stages allowing quicker, easier & safer work.

The extended forward/reverse lever makes it easier to select the direction while wearing even the thickest gloves.

Our contoured comfort grip dielectric handle & hex cap was designed with linemans gloves in mind for maximum comfort, grip & safety.

George Fussell, a tenured lineman, began his career in the electrical industry as a groundsman in 2001. He quickly advanced to an apprentice in late 2002 and spent 4 years learning the industry inside and out. In 2007 he graduated to First Class Lineman where he spent 10 years working on underground and over head transformers.

Ratcheting Wheel

Our patented Ratcheting Wheel provides a large surface area for lineman to hold and ratchet to prevent lugs from free spinning in the initial stages of tightening.

Street Light Tech Favorites

Versatility

The Ratcheting Wheel linemans insulated hex wrench is available in multiple configurations for your needs.

- 3/16, 5/16*, 3/8 Hex x 1 5/8" standard usable length
 - Ratcheting or Fixed Penta Socket
 - 9/16 & 5/8 Sockets
 - Single or Dual ratchets
- *5/16 available in custom length

Ratcheting Wheel Tools offers over 50 different configurations to ensure you have the right tool in your hand.

Heavy Duty

Safety

Made of certified non-conductive dielectric polymer that exceeds 1,000 Volts/.100" per ASTM 1505-16.

1.250" Tool separation for hot work with see through hole in handle for visual confirmation of separation. White non-conductive hex cap for added safety.

Non-slip ergonomic handle, longer forward/reverse lever, non-conductive cap & our patented Ratcheting Wheel means safer onehanded operation.

The Buzz

Lineman who have tried the Ratcheting Wheel insulated hex wrench agree that it makes their job quicker, easier and safer. From the moment George started using the first prototype in the field, lineman have been asking for this wrench.
